Orange Box*

# 3D Map Generator 2 - Isometric

Extension panel for Photoshop® CS6, CC, CC-2014

Actions set for Photoshop® CS4 and higher

The 3D-Map-Generator-2 is a complete new development of the popular „3D Map Generator Pro“. Now it is possible to determine the size of the 3D-Map by yourself. The isometric orientation of the 3D-Maps offers new possibilities in usage and design. With the new surfaces, layer structures, ground and background effects and the Top-Layer-Designer you can design your map more individual and more detailed. And you are able to redesign it as often as you want!

## Isometric Smart Object maps

- Three Isometric map orientation
- 3D-Maps from every shape and any size
- Smart Object maps
- Unlimited map size
- Unlimited quantity of layers (map height)

## Map styles and backgrounds

- Layer structure with 3D effect
- Gravel and spume effect
- Map design presettings
- Background presettings
- Surface, side surface and background editable separately for unlimited times
- Global light function

## Top-Layer-Designer

- Perfectly aligned marks and surface objects
- Pre-built brushes and styles for streets, paths, rivers, lakes
- 23 pre-built rail and road segments
- Unlimited editable via Smart Object

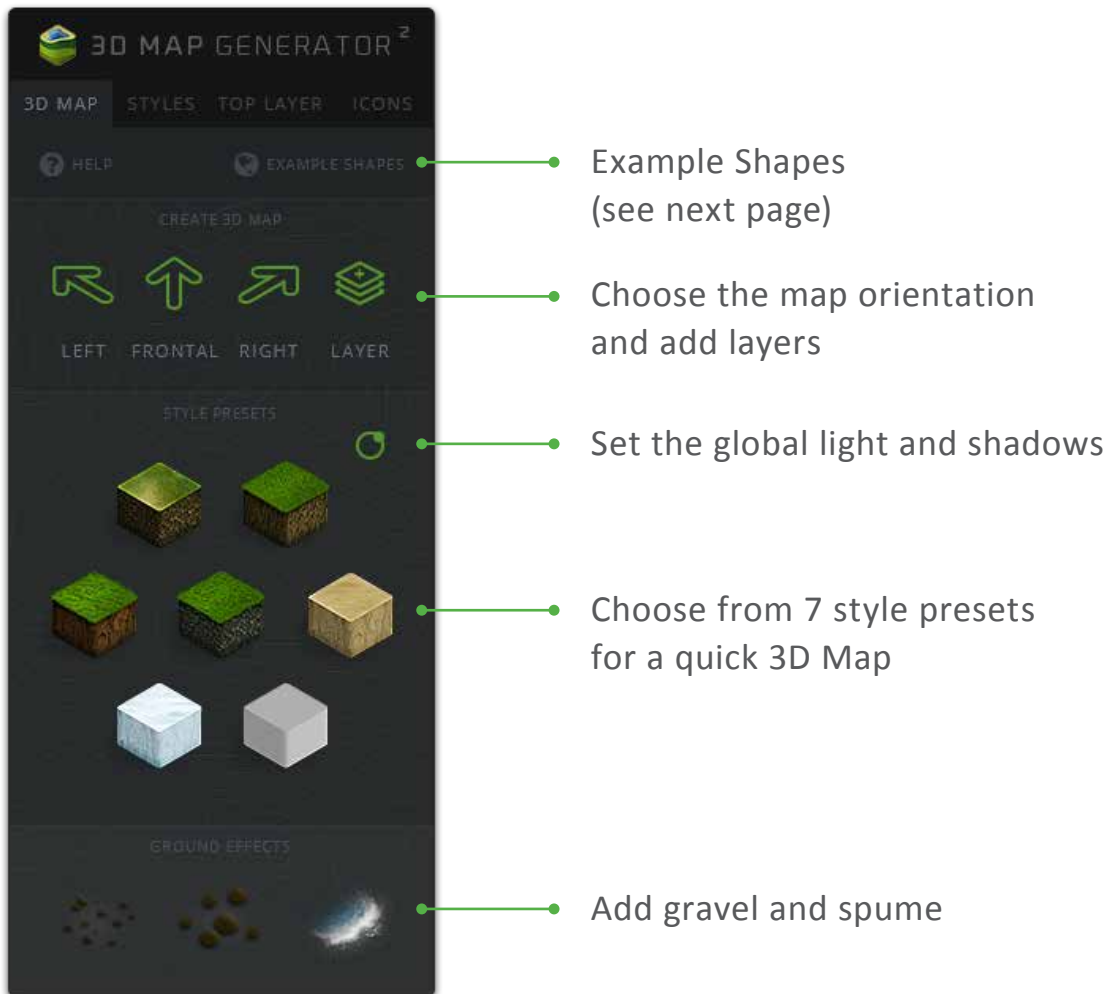

## Extra

- 21 detailed basic icons in isometric orientation
- 19 country vector shapes, 1 soccer field with field marks

## Panel Overview (CC-2014 Version)

### 3D Map

As a base area there can be used pixel, text layer, vector layer or SmartObjects. The size of the base area is freely selectable and sets the size of the 3D Map. The finished 3D Map will be automatically generated in a 300 dpi document.

Note: Before the first use of the panel version CS6 you have to click on the „Install“ button to load all styles etc.

19 example shapes

## Example shapes

For your first trying there are 19 example shapes and one soccer field available (watch the tutorial videos).

Background presets

Set the global light and shadows

Changes only the surface of the 3D Map

Changes the layer texture

Changes the layer color

## Styles

The style preset can all be refined and customized. Theoretically 680 variations are possible.

Open and close the Top-Layer

Pre-built brushes

Different surface textures for designing the terrain

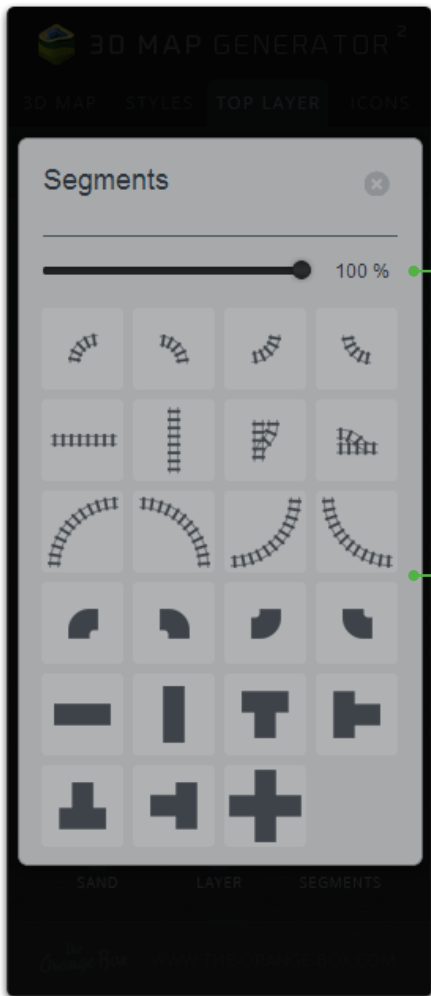

23 rail and road segments (see next page)

## Top Layer

The Top-Layer is the topmost level of the 3D Map. Within the Top-Layer there can be placed every texture, marking, lettering or other stuff.

For generating a new texture layer choose one of the style layers. A new style layer will automatically be placed on the topmost level of the layer palette.

Use the pre-built brushes to texturize the terrain or to create paths, roads and waters. Play around with the size and the opacity of the brushes.

Segment size slider

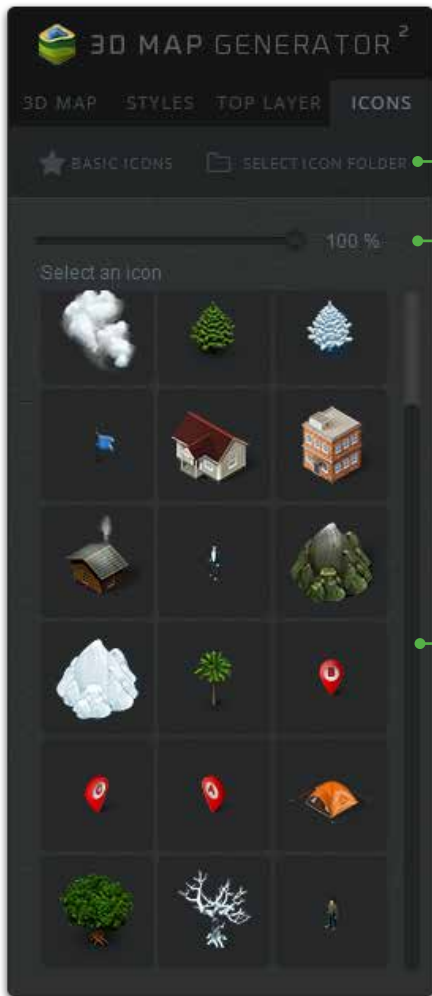

23 rail and road segments

## Rail and road segments

With these 23 segments its possible to quickly create extensive rail and road systems.

The segment size slider helps you to keep the same size all the time.

Load your own icons

Icon size slider

Did you also buy the isometric icon sets from us? Then easily select the folder „psds\_single“ in the set to load the editable icons into the panel.

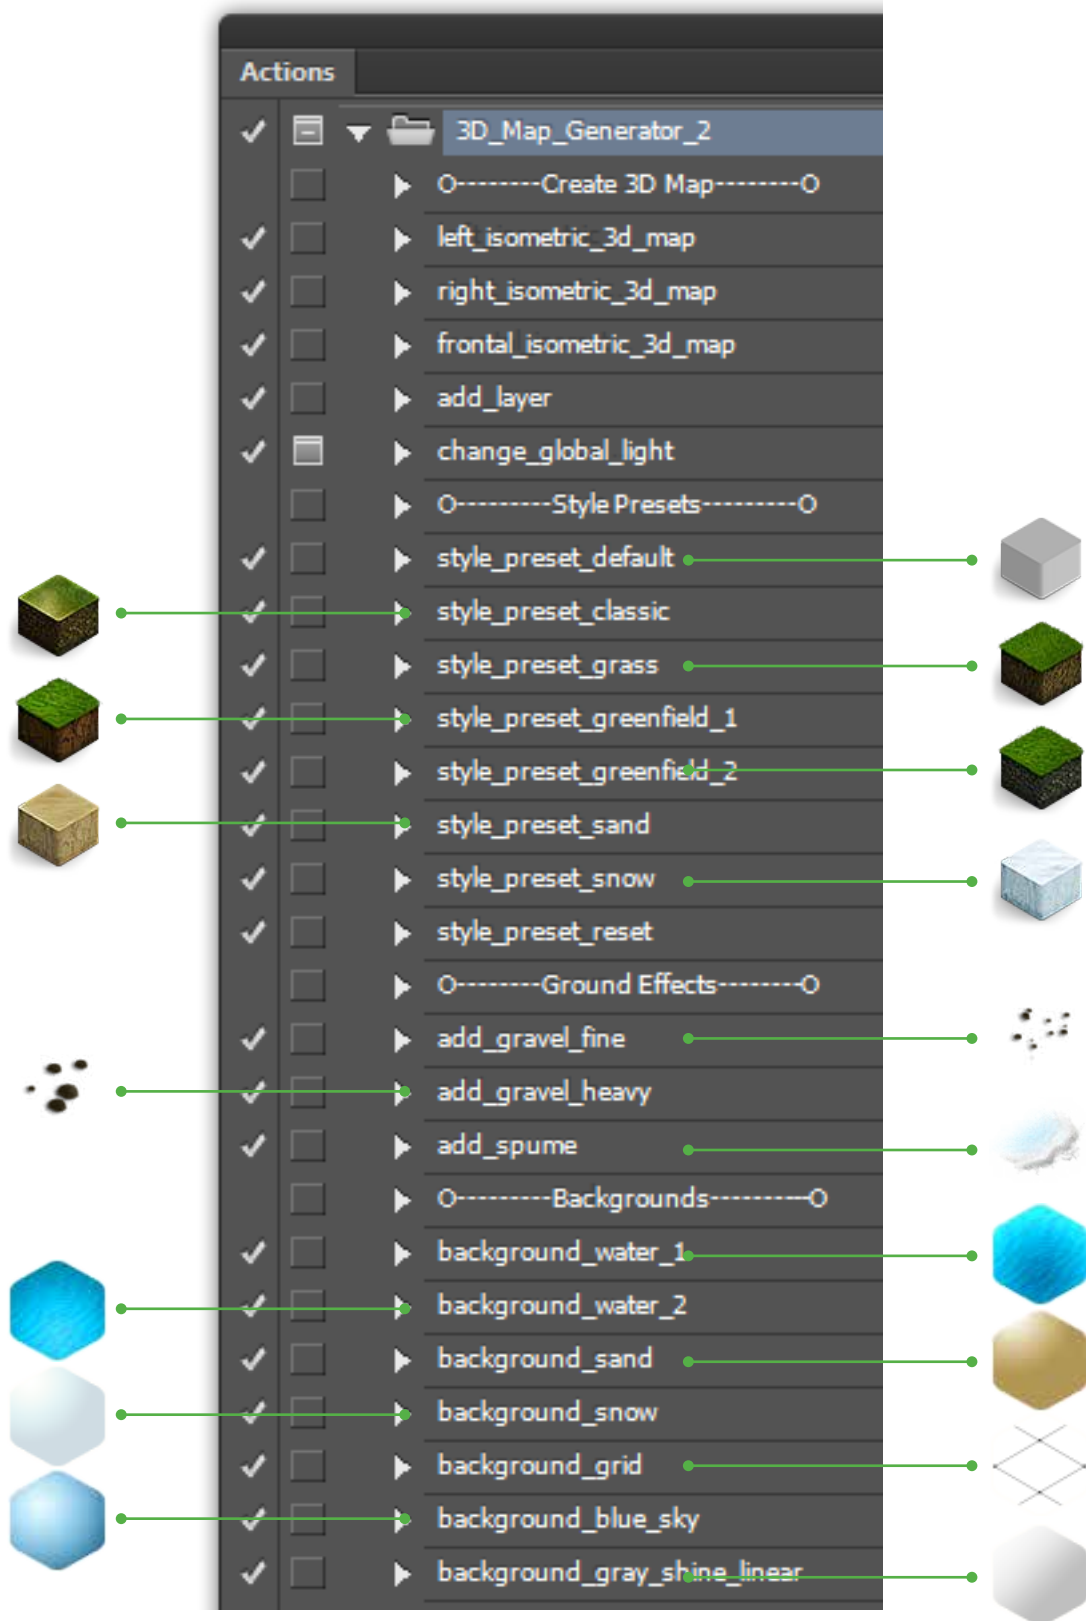

## Icons

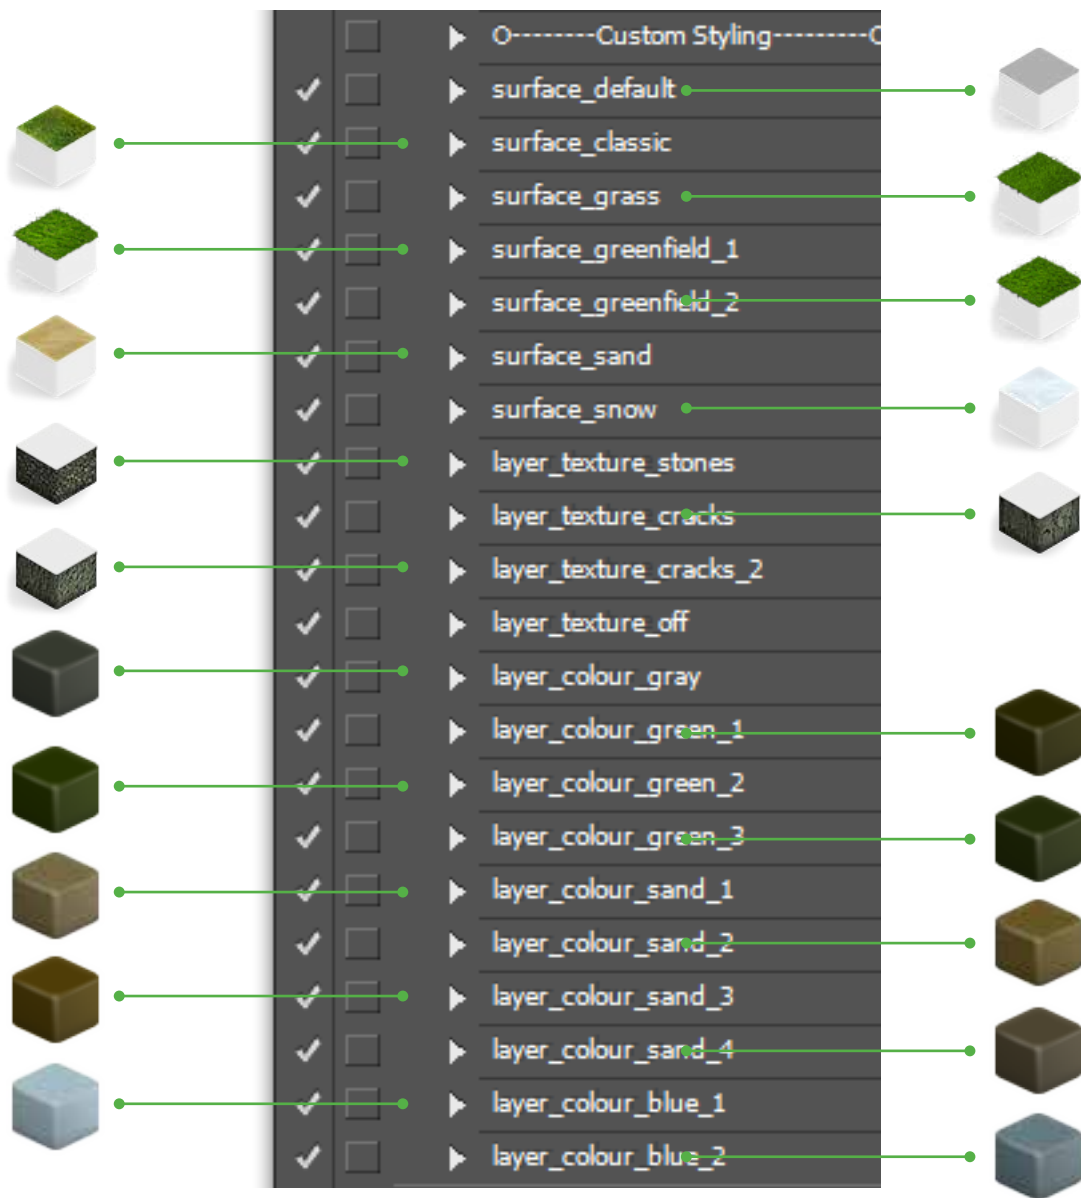

In the tab „Icons“ you can find all the 21 basic icons. In the panel version CC-2014 it is possible to load own icons into the panel. You can upload PNG files or PSD files with only one layer:

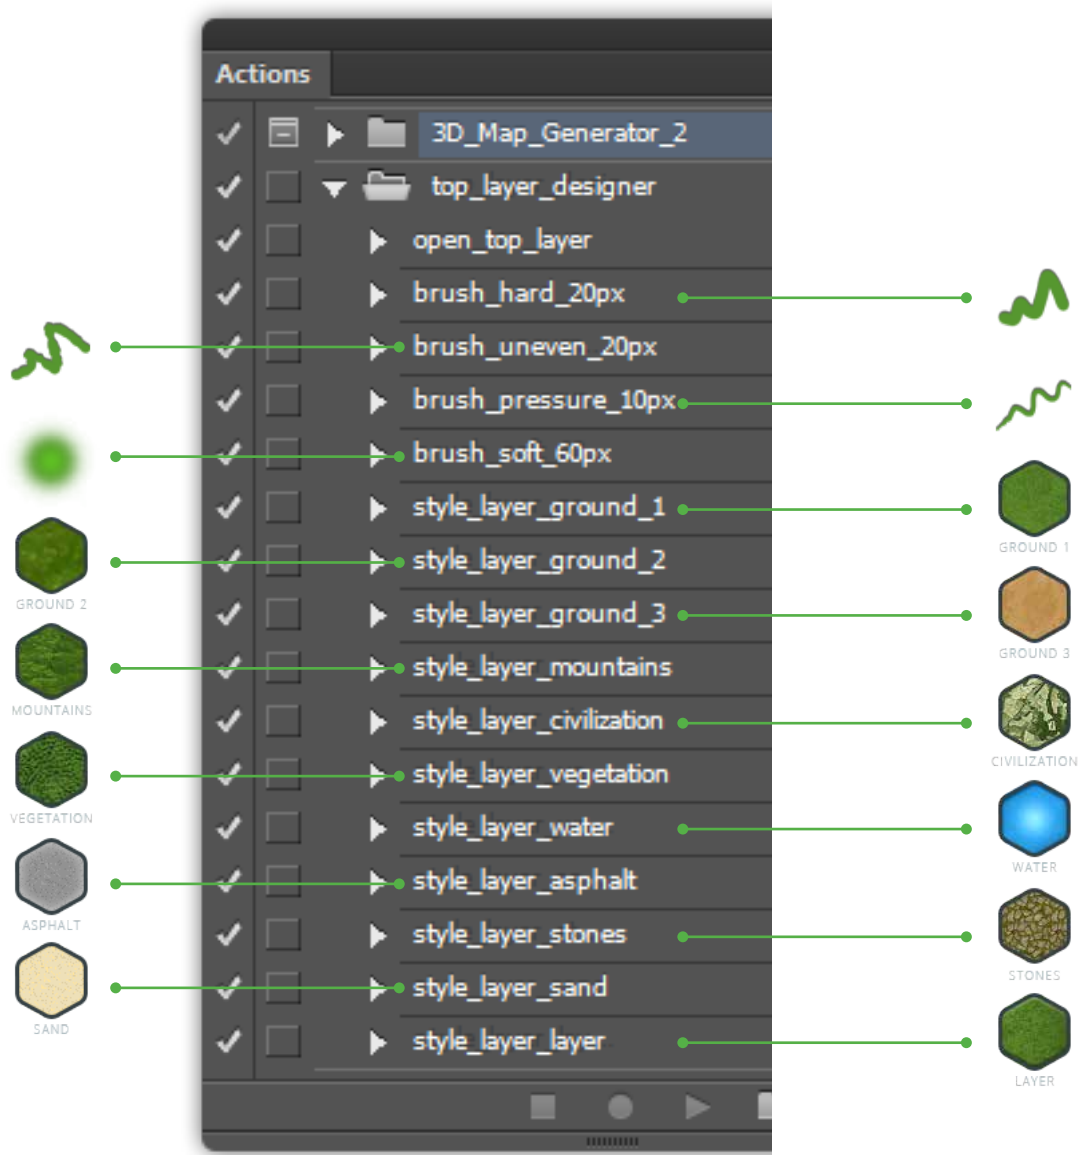

1. Select the icon folder
2. Thumbnails are generated automatically
3. The icons can be loaded

At the first load of an own icons folder a „thumbnail“ folder will be generated. If the folder should be filled with new icons, first the „thumbnails“ folder has to be deleted manually to upload all icons into the panel.
